

Does your organisation have a power outage contingency plan?

If your business relies on power, you will need a UPS System.

What is a UPS System?

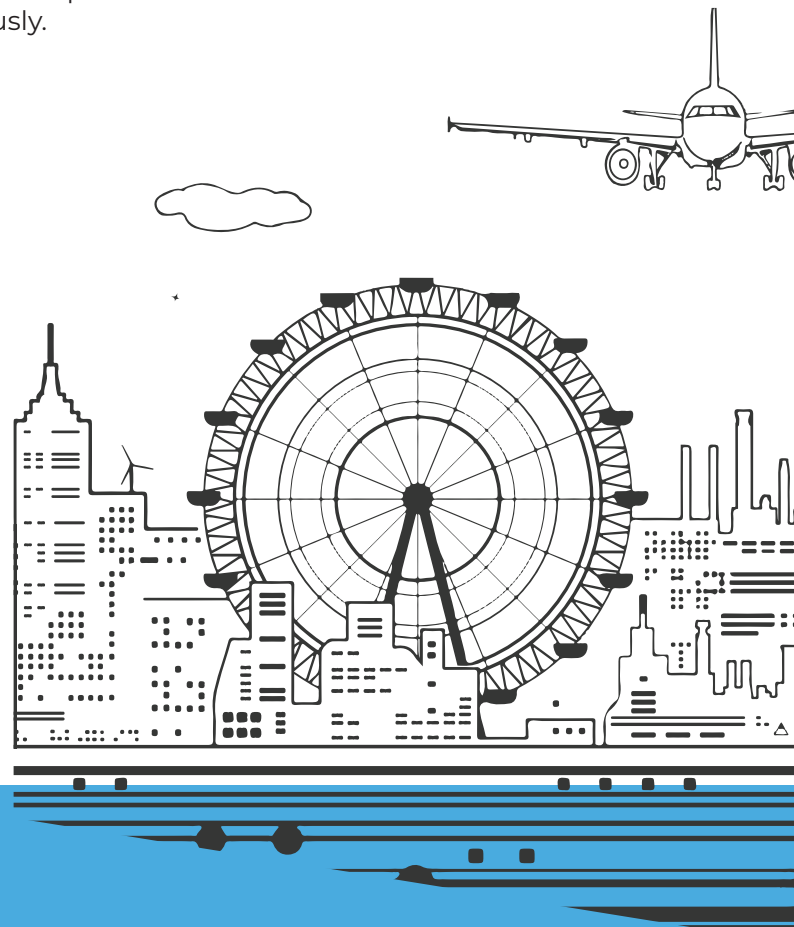

An Uninterruptible Power Supply (UPS) is a vital Battery Backup System which ensures that your business continues operating seamlessly regardless of power related issues when it is needed and most importantly conditions the power continuously.

How can BCL Power help?

BCL Power provide reliable UPS and battery services.

- UPS Maintenance
- UPS Installations
- UPS Battery Installation
- UPS Battery Maintenance
- UPS Battery Replacement
- 24-Hour Support for UPS Systems

Making sure that your UPS system is correctly installed and setup for optimum performance is critical to your company's operations.

UPS Maintenance

The absence of a UPS System and effective battery maintenance could be catastrophic should your emergency standby power system fail. Wouldn't it be preferable to avoid risking the expense, inconvenience, and stress of unnecessary downtime due to a faulty standby power system?

To ensure risk reduction and the reliability of your UPS systems in the event of a power failure, BCL Power offers a range of UPS maintenance solutions. These are the Standard, Advanced and Premium UPS maintenance solutions. Each level includes a preventative maintenance visit (PMV). 24/7 technical support and an agreed response time to site as standard. Each UPS maintenance solution can be tailored to suit your specific requirements.

Response

Depending on the level of UPS maintenance cover you choose, our service support team will be onsite in 4 hours, 8 hours or the next business day to help. Identifying the issues whether it is emergency standby batteries or a UPS component fault, we will isolate and correct the situation.

Parts

With UPS System components and replacement batteries on hand, we are well equipped to repair or replace parts at the first visit to site.

Support

By taking out a UPS maintenance package with BCL Power, you can take advantage of our dedicated support team all year round.

“Having a formal standby power services resiliency programme will prevent unwanted outages”

UPS Installations

BCL Power will manage every aspect of the UPS System installation.

We manage the entire installation process for you including the delivery, electrical works, battery installs and removals of any old equipment in line with current safety legislation.

Our coordination team will arrange everything and once all the final checks are complete, your UPS systems will be warranty registered.

Maintenance recommendations

Whether it's a Single-Phase Rack-Mounted UPS, or a large Three-Phase industrial system, we provide the same level of expertise and preparation for every project.

Battery Replacement & Testing

We understand the complications regarding UPS batteries installations, whether it is single-cell replacement or a completely new install. Our services cover the supply, logistics, decommissioning, installation and certificated disposal.

To ensure that your UPS system is always working correctly, it is important to have regular battery checks performed. At BCL Power, our engineers are trained to perform routine battery maintenance including conductance, impedance and discharge testing.

50-70%

“Battery failure is the cause of 50 to 70 percent of UPS outages”

UPS Maintenance

Established in 1994, BCL Power has evolved into a complete standby power solutions provider, including the supply, installation, maintenance, and support of UPS systems, stationary batteries, VDC Power equipment and remote management for all emergency power equipment.

Registered Waste Carrier

Partners

We work continuously with leading critical power and stationary battery companies.
